MWA with STC

API requests:

Http requests need URL for get exeat data from the destination (server-DB), CRUD operations like Post, Get, Put, Post, delete methods and these methods needs one or more callbacks functions to be with the result and you can send data with the request as a parameter or body. Which is supported by all modern browser, this object opens a connection with a server, sends a message, waits for the response, and then activates a given callback method.

API requests are highly efficient to obtain data from the server (source of application data).

The TM technique is a highly efficient to experience pure consciousness from the source of thought. Also, it's supported by any human nervous system. It allows us to connect with the source of thought, experience restful alertness, and then return to activity with that influence of calm alertness.

JSON:

JSON is structure style to get and send data between http request and servers it's a good technique, it's almost identical to JS.

We always prefer to do accomplish more. Actions arising from deep levels of consciousness are more efference and effective.

Angular:

User Interface with HTML, CSS, JS is useful for making web pages highly responsive with a lot of screen sizes.

Angular allows JS to access the server in very efficient using Async messaging and make allow the developers to make web applications using one page.

Transcendental consciousness is the experience of the home of all the laws of nature where all information is available at every refreshing.

Impulses within the transcendental field: Communication at the level is instantaneous and effortless.

Wholeness moving within itself in unity consciousness daily life is experienced in terms of this frictionless and effortless flow of information.
